Erlang: $X \sim \text{Erlang}(k, \lambda)$ sum of k i.i.d $\text{Expo}(\lambda)$

$\mathbb{E}[X] = \frac{k}{\lambda}$	$\text{Var}[X] = \frac{k}{\lambda^2}$
$f(x) = \frac{\lambda^k x^{k-1} e^{-\lambda x}}{(k-1)!}$	$F(x) = 1 - \sum_{n=0}^{k-1} \frac{1}{n!} e^{-\lambda x} (\lambda x)^n$
$X \sim \text{Erlang}(k, \lambda) \Rightarrow \alpha X \sim \text{Erlang}\left(k, \frac{\lambda}{\alpha}\right)$	
$X \sim \text{Erlang}(k_1, \lambda), Y \sim \text{Erlang}(k_2, \lambda)$ independent \Rightarrow $X + Y \sim \text{Erlang}(k_1 + k_2, \lambda)$	

Pascal: $X \sim \text{Pascal}(k, p)$ sum of k i.i.d $\text{Geometric}(p)$

$\mathbb{E}[X] = \frac{k}{p}$	$\text{Var}[X] = \frac{k(1-p)}{p^2}$
$\mathbb{E}[X^2] = \frac{k^2 + k(1-p)}{p^2}$	$M_X(s) = \left[\frac{pe^s}{1 - (1-p)e^s} \right]^k$
$p_X(x) = \binom{x-1}{k-1} p^k (1-p)^{x-k}$ $k = 1, 2, \dots; x = k, k+1, \dots$	
$F_X[x] = \mathbb{P}[X \leq x] = \sum_{n=k}^x \binom{n-1}{k-1} p^k (1-p)^{n-k}$	

Joint and Conditional Probability

- $p_{X|Y}(x|y) = \frac{\mathbb{P}[X=x, Y=y]}{\mathbb{P}[Y=y]} = \frac{p_{X,Y}(x,y)}{p_Y(y)}$
- $p_{X,Y}(x,y) = p_Y(y)p_{X|Y}(x|y)$
- $f_{X,Y}(x,y) = \frac{\partial F_{X,Y}}{\partial x \partial y}(x,y)$
- $f_{X,Y}(x,y) = f_Y(y)f_{X|Y}(x|y)$
- $f_X(x) = \int_{-\infty}^{\infty} f_Y(y)f_{X|Y}(x|y) dy$
- $f_X(x) = \sum_{i=1}^n f_{X|A_i}(x) \mathbb{P}[A_i]$

Bayes and Continuous Bayes

- $$\mathbb{P}[A|B] = \frac{\mathbb{P}[B|A]\mathbb{P}[A]}{\mathbb{P}[B]}$$
- $f_Y(y)f_{X|Y}(x|y) = f_X(x)f_{Y|X}(y|x)$
 - $f_{X|Y}(x|y) = \frac{f_X(x)f_{Y|X}(y|x)}{\int_{-\infty}^{\infty} f_X(t)f_{Y|X}(y|t) dt}$
 - $f_Y(y)\mathbb{P}[N=n|Y=y] = \mathbb{P}[N=n]f_{Y|N}(y|n)$
 - $\mathbb{P}[N=n|Y=y] = \frac{\mathbb{P}[N=n]f_{Y|N}(y|n)}{\sum_i \mathbb{P}[N=i]f_{Y|N}(y|i)}$
 - $f_{Y|N}(y|n) = \frac{f_Y(y)\mathbb{P}[N=n|Y=y]}{\int_{-\infty}^{\infty} f_Y(t)\mathbb{P}[N=n|Y=t] dt}$

Differential Probability and Convolution

- $f_X(x) dx = \mathbb{P}[x \leq X \leq x+dx]$
- $f_{X|Y}(x|y) dx = \frac{\mathbb{P}[x \leq X \leq x+dx, y \leq Y \leq y+dy]}{\mathbb{P}[y \leq Y \leq y+dy]}$
- $\frac{d}{dz} \mathbb{P}[Z \leq z|X=x] = f_{Z|X}(z|x)$
- $f_Y(y) = f_X(f^{-1}(y)) \left| \frac{df^{-1}}{dy}(y) \right|$

- [WLLN] Let $(X_n)_n$ be a sequence of i.i.d. random variables with mean μ . $\forall \epsilon > 0$

$$\mathbb{P}\left[\left|\frac{X_1 + \dots + X_n}{n} - \mu\right| \geq \epsilon\right] \rightarrow 0 \quad \text{as } n \rightarrow \infty$$

- [SLLN] Let $(X_n)_n$ be a sequence of i.i.d. random variables with mean μ . Then $M_n = \frac{X_1 + \dots + X_n}{n}$ converges to μ with probability 1.

$$\mathbb{P}\left[\lim_{n \rightarrow \infty} \frac{X_1 + \dots + X_n}{n} = \mu\right] = 1$$

$$\text{i.e. } \forall \epsilon > 0, \mathbb{P}[|M_n - \mu| > \epsilon \text{ i.o.}] = 0$$

- [De Moivre-Laplace approximation]
If $S_n \sim \text{Binomial}(n, p)$ and $n \gg 1$ and k, l nonnegative integers, then:

$$\mathbb{P}[k \leq S_n \leq l] \approx \Phi\left(\frac{l + \frac{1}{2} - np}{\sqrt{np(1-p)}}\right) - \Phi\left(\frac{k - \frac{1}{2} - np}{\sqrt{np(1-p)}}\right)$$

Conditional Expectation and Variance

Note $\mathbb{E}[Y|X] = f(X)$ i.e. is a function of X

Note $\mathbb{E}[Y|X=x]$ is a real number

To find $\mathbb{E}[X|Y]$, generalize pattern from $\mathbb{E}[X|Y=y]$

1. (Linearity)

$$\mathbb{E}[a_1 Y_1 + a_2 Y_2 | X] = a_1 \mathbb{E}[Y_1 | X] + a_2 \mathbb{E}[Y_2 | X]$$

2. (Factoring known values)

$$\mathbb{E}[h(X)Y | X] = h(X)\mathbb{E}[Y | X]$$

3. (Independence) If X, Y independent:

$$\mathbb{E}[Y | X] = \mathbb{E}[Y]$$

$$\mathbb{E}[\mathbb{E}[X|Y]] = \mathbb{E}[X]$$

$$\text{Var}[X] = \mathbb{E}[\text{Var}[X|Y]] + \text{Var}[\mathbb{E}[X|Y]]$$

$$\mathbb{E}[XY] = \mathbb{E}[\mathbb{E}[XY|Y]] = \mathbb{E}[Y\mathbb{E}[X|Y]]$$

Conditioning on event

- $\mathbb{E}[X|A] = \int_{-\infty}^{\infty} x f_{X|A}(x) dx$
- $\mathbb{E}[g(X)|A] = \int_{-\infty}^{\infty} g(x) f_{X|A}(x) dx$
- $\mathbb{E}[X] = \sum_{i=1}^n \mathbb{P}[A_i] \mathbb{E}[X|A_i]$

Conditioning on RV

- $\mathbb{E}[Y] = \mathbb{E}[\mathbb{E}[Y|X]] = \int_{-\infty}^{\infty} \mathbb{E}[Y|X=x] f_X(x) dx$
- $\mathbb{E}[X|Y=y] = \int_{-\infty}^{\infty} x f_{X|Y}(x|y) dx$
- $\mathbb{E}[g(X)|Y=y] = \int_{-\infty}^{\infty} g(x) f_{X|Y}(x|y) dx$
- $\mathbb{E}[g(X, Y)|Y=y] = \int_{-\infty}^{\infty} g(x, y) f_{X|Y}(x|y) dx$

Convergence in Probability

A sequence $(X_n)_n$ converges in probability to X , denoted as $X_n \xrightarrow{p} X$, if $\forall \epsilon > 0$, $\lim_{n \rightarrow \infty} \mathbb{P}[|X_n - X| \geq \epsilon] = 0$

Theorem: If $X_n \xrightarrow{d} c$ constant, then $X_n \xrightarrow{p} c$.

Convergence with Probability 1

A sequence $(X_n)_n$ converges almost surely to X , denoted as $X_n \xrightarrow{a.s.} X$, if under sample space Ω , $\mathbb{P}\left[\left\{\omega \in \Omega: \lim_{n \rightarrow \infty} X_n(\omega) = X(\omega)\right\}\right] = 1$

Theorem: Consider $(X_n)_n$. If $\forall \epsilon > 0$, $\sum_{n=1}^{\infty} \mathbb{P}[|X_n - X| > \epsilon] < \infty$, then $X_n \xrightarrow{a.s.} X$

Theorem: Consider $(X_n)_n$. For $\epsilon > 0$, define $A_m = \{|X_n - X| < \epsilon \ \forall n \geq m\}$, then $X_n \xrightarrow{a.s.} X$ if and only if $\lim_{m \rightarrow \infty} \mathbb{P}[A_m] = 1$.

by $\{-1, +1\}$ with probability $\frac{1}{2}$. Game ends when he reaches 0 or n . Then, probability he reaches n is $\frac{i}{n}$.

- [Gambler's Ruin (unfair)] If probability is p , then probability of him reaching n is

$$\frac{1 - \left(\frac{p}{1-p}\right)^{n-i}}{1 - \left(\frac{p}{1-p}\right)^n}$$

- [Secretary] Optimal cutoff is ne^{-1} .
- [Coupon collector] $nH_n = n \sum_{i=1}^n \frac{1}{i}$

Miscellaneous**Tail Sum (X, Z nonnegative)****Discrete**

$$\mathbb{E}[X] = \sum_{i=1}^{\infty} \mathbb{P}[X \geq i]$$

Continuous

$$\mathbb{E}[Z] = \int_0^{\infty} \mathbb{P}[Z \geq z] dz$$

$$\mathbb{E}[X] = \int_0^{\infty} \mathbb{P}[X > x] dx - \int_0^{\infty} \mathbb{P}[X < -x] dx$$

If X is a random variable, then $\mathbb{P}[X = 0] \leq \frac{\text{Var}[X]}{\mathbb{E}[X]^2}$

Union bound

$$\mathbb{P}\left[\bigcup_{i=1}^n A_i\right] \leq \sum_{i=1}^n \mathbb{P}[A_i]$$

 k th Order Statistics

$$f_{X^{(i)}}(x) = n \binom{n-1}{i-1} f(x) F(x)^{i-1} (1 - F(x))^{n-i}$$

$$\mathbb{E}[X^{(i)}] = \frac{i}{n+1} \text{ (uniform distribution)}$$

$X \sim N(0,1)$	$f_{X^2}(x) = \frac{1}{\sqrt{2\pi x}} e^{-\frac{x}{2}}$	$f_{X^2+Y^2}(z) = \frac{1}{2} e^{-\frac{z}{2}}$
-----------------	---	---

$$\int_0^1 y^\alpha (1-y)^\beta dy = \frac{\alpha! \beta!}{(\alpha + \beta + 1)!}$$

$$I_k = \int_0^\infty x^k e^{-\theta x} dx$$

$$I_k = \frac{k}{\theta} I_{k-1} \Rightarrow I_k = \frac{k!}{\theta^{k+1}}$$

Last Resort and Final Checks

- Think indicators, even bizarre ones (e.g. I_i indicate whether i th bad ball appears before first good ball)
- $\text{Var}[X] = \text{Cov}[X, X]$, then whack using indicators.
- Symmetry; Bijection arguments; Coupling (bijection to $[0,1]$)
- Draw pictures: represent each RV by \mathbb{R} , then reduce to geometry problem
- **Remember** to define all the range, especially for $f_X, F_X!$ ($= 0$ elsewhere)
- Reduce to classic problem
- Isolate objects, especially in sequences or lines
- Guard against one-off errors, especially in indicators. Check small cases.
- Consider conditioning on some events.
- Just use intuition and take care of momentum!
